

## INFORMATION NOTICE

Be advised that we may receive phone calls about a agricultural chemical spill at one of the tributary streams which drain to the water reservoir. The spill is not in the reservoir itself.

Ohio EPA and Ohio Department of Natural Resources are investigating a spill on a farm at a tributary streams that leads to the north end of the reservoir. The spill is at Beech and Fixler Roads in Medina County.

There has been fish kills in the stream, but the opinion from the agencies at this time is that dilution in the body of water will eliminate any problems before reaching the treatment plant. We are continuing to test the stream and reservoir itself over the next few weeks.

I have been told that the news story is on the radio, so we may be receiving calls.
